[processing color signals and outputting s luminance sig](#)

[Customize](#) ▾

1 - 4 of 4 for processing color signals and outputting a luminance signal and color difference signals and converting first color signals having

primary color points in a wider color range than primary color points according to a predetermined standard by which color difference signals having a first numerical range are assigned to an integral value in a first integral range which is smaller than an integral range which can be expressed by a plurality of bits into second color signals based on primary colors according to said predetermined standard and converting said second signals into third color signals according to photoelectric transducer characteristics defined in a numerical range which is greater than a numerical range of color signals corresponding to a luminance signal and color difference signals according to said predetermined standard ([About](#)) - 0.63 s | [SearchScan](#)^{BETA}
